PROFESSIONAL SUMMARY

Full stack and mobile engineer with 3+ years shipping production applications in Flutter, React Native, native iOS and Android, and Laravel. Tech Lead at Odecci Solutions Inc., named by the CTO as owner of code quality, delivery progress and documentation for a four-person Agile team and an external vendor team. Delivers Gulf and Australian client engagements entirely remotely — architecture decisions, migration and deployment plans, cross-platform regression suites, and client-facing technical documentation. Practises AI-assisted development (Claude Code, MCP servers, agentic workflows) as daily engineering discipline.

CORE SKILLS

Languages: Dart, TypeScript, JavaScript, PHP, Kotlin, Java, Swift, Objective-C, SQL

Mobile: Flutter, React Native, iOS (Swift, UIKit, Objective-C), Android (Kotlin, Java), Expo EAS

Backend & Web: Laravel, Node.js, RESTful APIs, Livewire, Alpine.js, Tailwind CSS, WordPress

Data & Infrastructure: MySQL, Redis, Firebase (Auth, Firestore, Cloud Messaging), Isar, Docker, Ubuntu

DevOps: Git, GitHub Actions, CI/CD, Fastlane, App Store Connect, Google Play Console

Architecture: Clean Architecture, MVVM, MVC, Riverpod, GoRouter, Hilt, monolith and microservices

AI Engineering: Claude Code, MCP servers, agentic workflows, GitHub Copilot, Cursor, Gemini API

Leadership: Team leadership, code review, mentoring, Architecture Decision Records, Agile and Scrum, stakeholder and vendor management

PROFESSIONAL EXPERIENCE

Tech Lead & Mid-Level Full Stack Developer

Feb 2026 – Present

Odecci Solutions Inc. — Bulacan, Philippines (hybrid)

- Named by the CTO as Tech Lead for code quality, delivery progress and documentation; lead four direct reports (.NET and PHP full-stack, application specialist, project coordinator) plus an external vendor team whose CMS and mobile deliverables I have reviewed and validated continuously since March 2026.
- Own the React Native cross-platform migration of a Gulf property group's resident-services app: authored a 262-case regression suite spanning 16 modules on iOS and Android, a 23-screen UI punch list triaged P1/P2/P3 with a prescribed fix sequence, and the 2.0.0 deployment and migration plan delivered to the CTO and CEO.
- Overturned a client-requested rename-and-republish in favour of an in-place store update, citing the identity-preservation finding in ADR-002 — removing a release cycle from the schedule and sparing 6,878 active residents a forced re-install and re-registration.
- Resolved 99 of 102 support tickets (97%) across three production mobile products in seven months, spanning booking, chat, notifications, tenant data, leasing and release-stability workstreams, with severity triaged per ticket.
- Designed and ran the company's internship programme end to end — lifecycle roadmap, general and technical screening examinations, and interviews; pooled 10–20 candidates, shortlisted 5 and onboarded 3.
- Sole owner of a new Australian client engagement end to end — environment, database, Git and deploy workflow, domain and SSL, Laravel scaffold, AI tooling — then authored and validated the five-milestone setup guide that shipped as the deliverable.
- Ran technical onboarding for a 12-week, five-phase website revamp for an Australian healthcare-technology client; specified a custom CMS over WordPress on performance, scalability and content-management grounds.
- Delivered Docker containerisation, Redis caching and MySQL on the corporate web platform, including six merged pull requests in one day across dashboard analytics, navigation scroll and a build-independent CMS admin shell.
- Instituted the team's operating cadence: written daily work logs, a shared blocker register, English-only standups, a 24-hour PR-review SLA and a weekly written status report to the CTO.

Acting Tech Lead

Oct 2025 – Jan 2026

Odecci Solutions Inc. — Bulacan, Philippines

- Appointed Acting Tech Lead while retaining full individual-contributor delivery; ran all Agile ceremonies — sprint planning, standups and retrospectives — for a team of four engineers.
- Owned technical decisions and authored the team's first Architecture Decision Records, establishing the documentation standard later applied to client migration work.
- Built and maintained release pipelines on GitHub Actions, Expo EAS and Docker, removing manual steps from both mobile and web deployments.

Full Stack & Mobile Developer

Jan 2024 – Sep 2025

Odecci Solutions Inc. — Bulacan, Philippines

- Sole maintainer of the company's entire mobile portfolio across native iOS (Swift, Objective-C), Android (Kotlin, Java) and React Native — five production applications published to the App Store and Google Play.
- Rebuilt the in-app customer-service chat attachment and image pipeline on the native iOS app, tracing blank-image failures to a discarded error parameter in the image-loading callback and a client/server contract mismatch in how message text and file URLs were transmitted.
- Established AI-assisted development (Claude, Cursor, GitHub Copilot) as standard workflow, backed by a persistent engineering knowledge vault — the largest single contributor to delivery speed over the period.
- Presented technical roadmaps, delivery timelines and risk to non-technical management and client stakeholders.

Part-Time Full Stack Developer

May 2024 – Present

Polytechnic University of the Philippines — Manila, Philippines

- Delivered the full software development lifecycle for an internal Procurement Project Tracker in Laravel — requirements, schema design, build, deployment and handover.
- Provide ongoing enhancement and systems integration supporting university procurement operations.

WordPress Developer

Nov 2023 – Jan 2024

Odecci Solutions Inc. — Bulacan, Philippines

- Built and maintained client WordPress sites using Elementor and Divi, delivering UI/UX improvements and content-management workflows for client-facing properties.

Front-End Developer (Internship to Full-time)

May 2023 – Nov 2023

Odecci Solutions Inc. — Bulacan, Philippines

- Designed and built the front end of a lending management system, from Figma wireframes and prototypes through to implementation; converted from intern to regular employee in September 2023.

SELECTED PROJECTS

Service Booking Platform — *Flutter, Firebase, Google Maps, Riverpod*. All-in-one service booking platform; led the mobile architecture from scratch, including real-time sync and map-based service discovery.

Resident Services App — *Swift, UIKit, React Native*. Native iOS resident-services app for a Gulf property group, serving 6,878 active residents; rebuilt the in-app support chat attachment and image pipeline, and now lead the cross-platform 2.0.0 migration.

Livestock Field App — *Kotlin, MVVM, Hilt*. Offline-capable herd-management field application for a government agricultural agency; animal, herd and farmer registries across 18 backend services with QR-based lookup, holding 10,000+ animal records and growing.

Membership Privileges App — *React Native, Expo EAS*. Digital membership card with QR verification and a privileges catalogue for 1,559 active members, shipped to both the App Store and Google Play.

Quorfin — *Flutter, Isar, Gemini API (personal project)*. Offline-first personal finance app: field-level AES encryption at rest, biometric lock, crash-safe key rotation, encrypted backup and restore, PDF and CSV export, and a streaming AI advisor with bring-your-own-key and offline fallback.

EDUCATION

Diploma in Computer Engineering Technology — Polytechnic University of the Philippines

2020 – 2024
